Language Processing Study

The Pediatric Audiology Lab at the University of Iowa is recruiting children who wear cochlear implants for a research study looking at spoken language processing.

Who We Invite:

Children between the ages of 9 and 11 years who wear cochlear implants in one or both ears and are native English speakers are invited to participate.

What Will Happen:

Study tasks will include listening to and repeating back words, completing language and memory tests, and pointing to pictures on a computer screen. Participation in the study will last approximately 30 minutes to two hours. Your child will be compensated \$15/hour for participating in the study.

Researchers can come to you to conduct testing in a mobile testing van.
